

Contamination issues in COVID-19 injectable products

This is weird... I thought to jot down some notes.

Jessica Rose

In preparation for my upcoming presentation at a conference, I am making some slides concerning COVID-19 injectable product quality. I was looking around in VAERS for mentions of contamination to see if there are reports involving contaminated products.

It's really weird what I found. There are 11 (19.6%) deaths of the 56 reports with MedDRA codes "Product contamination physical" or "Product contamination". This is only the result of a query of MedDRA codes. That's a really high death rate associated with contamination!

VAERS_ID	SYMPTOM	AGE_YRS	STATE	SEX	SYMPTOM_TEXT
1435925	Product contamination , Pyrexia , Septic shock	NA	NA	U	Fatal fevers, Septic shock, Product contamination. Based on the current case data, this case has been classified as invalid. This spontaneous case was reported by a non-health professional and describes the occurrence of PRESUMED (Fatal fevers), SEPTIC SHOCK (Septic shock) and PRODUCT CONTAMINATION (Product contamination) in an elderly patient of an unknown gender who received mRNA-1273 (Moderna COVID-19 Vaccine) for COVID-19 prophylaxis. No Medical History information was reported. On an unknown date, the patient received dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) at an unspecified dose. On an unknown date, the patient experienced PRESUMED (Fatal fevers), SEPTIC SHOCK (Septic shock) and PRODUCT CONTAMINATION (Product contamination) (seriousness critical) (seriousness critical death and medically significant) and PRODUCT CONTAMINATION (Product contamination) (seriousness critical death). The cause of death was not reported. It is unknown if an autopsy was performed. Concomitant product use was not provided. 204 Patients received the vaccine. Treatment information was not provided. Very limited information regarding this event(s) has been provided at this time. Further information has been requested. Reported Cause(s) of Death: Unknown cause of death

Here's the weird thing about the report for VAERS_ID 1435925 which has since been classified as 'invalid'. It appears as though this is a report made for 104 people. I have seen this before in VAERS so I know it's a thing. But I am not sure about this particular report: it's hard to interpret these free text fields sometimes - but it would explain why there is no SEX and AGE_YRS data. But the thing is that this is a report for death. If this report is for 104 different individuals, did all of these purported 104 people die?

Another interesting report of contamination in VAERS refers to the known contamination of 3 batches of Moderna products that prompted the equivalent of 1.63 million doses to be withdrawn from the Japanese market. You can click on the photo to get to an article that reports on this in NIKKEI ASIA. This was originally written and published by Yumiko Urasaki and Yuko Nomura on August 26, 2021.

Moderna finds stainless steel particles in shots pulled in Japan

The ministry said later in the day that the substance that had been mixed in may have been metal. "It's a substance that reacts to magnets," a ministry official said. "It could be metal."

Takeda Pharmaceutical handles distribution of the U.S.-developed Moderna vaccine in Japan.

Nasdaq-listed Moderna confirmed receiving "several complaints of particulate matter" in vaccine vials distributed in Japan but said it had found "no safety or efficacy issues" related to these reports.

<https://asia.nikkei.com/Spotlight/Most-read-in-2021/1.6m-Moderna-doses-withdrawn-in-Japan-over-contamination>.

This article reports on 2 deaths in men in their 30s, due to contamination of the Moderna products. A subsequent article in NIKKEI ASIA was published on August 28, 2021 on these 2 deaths, and 11 others - seemingly unrelated to contamination issues - and you can read that [here](#).

But there are more than 2 reports of death in VAERS from Japan in the context of the Moderna shots - just in this short 'death contamination list'. There are 6.

VAERS_ID	SYMPTOM	AGE_YRS	STATE	SEX
1247158	Feeling abnormal , Headache , Presyncope , Product contamination physical , Syncope	36	FR	U
2324970	Death , Product contamination physical , NA , NA	38	FR	M
2326342	Death , Product contamination physical , NA , NA , NA	39	FR	M
2425847	Death , Product contamination physical , NA , NA , NA	41	FR	M
2425849	Death , Product contamination physical , NA , NA , NA	49	FR	M
2543907	Poor quality product administered , Product contamination physical , Snoring , Sudden cardiac death , NA	FE	FR	F

The first death contamination report in VAERS that caught my eye was the following report with VAERS_ID 2324970. There is a description of the contamination of a large number of doses (this represents the 3 batches that were pulled due to contamination), and a written admission that this previously healthy 38-year old man died after having received a dose of this contaminated product. The received date of the VAERS report in June 21, 2022 so was this product still being administered after it was pulled, or was this perhaps this was a delayed death? Or maybe just a delayed entry to VAERS? We will probably never know.

This report refers to the withdrawal of 1.63 million doses of Moderna product in Japan due to contamination.
Here is the report of the death of a 38-year-old man in Japan who was injected with some of it.

38 year old man died after receiving moderna, foreign material in vials. This spontaneous case was reported by a consumer and describes the occurrence of SEPTIC SHOCK 19 year old man died after receiving moderna in a 38-year-old male patient who received mRNA-1273 (COVID-19 Vaccine Moderna Intramuscular Injection) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below. No Medical History information was reported. On an unknown date, the patient received second dose of mRNA-1273 (COVID-19 Vaccine Moderna Intramuscular Injection) (unknown route) 1 dosage form. On an unknown date, the patient experienced SEPTIC SHOCK 19 year old man died after receiving moderna, foreign material in vials. This spontaneous case was reported by a consumer and describes the occurrence of SEPTIC SHOCK 19 year old man died after receiving moderna, foreign material in vials. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, PRODUCT CONTAMINATION PHYSICAL (foreign material) was also reported. The event death occurred after the second dose of mRNA-1273 vaccine administration. Allegedly, the event was described as it was determined that 3 batches of mRNA-1273 vaccine contained foreign materials. Hence, the administration of 3 full batches of mRNA-1273 vaccine was previously suspended. On unknown date, the patient received second dose of mRNA-1273 from one of these three batches. On unknown date, patient died after receiving second dose of mRNA-1273 vaccine. The reported cause of death was Sudden cardiac death. It is unknown if an autopsy was performed. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report. Reported Cause(s) of Death: Unknown cause of death

This next one (VAERS_ID = 2543907) is for a female. Or a male. Seriously. Not sure. Both are written in which makes me think that this report represents more than one person. On the last line of this free text report, it states that the SPLTTYE is JP-MODERNATX, INC.-MOD-2022-690712, which matches the woman's SPLTTYE but following this second statement it is written :49 year Male. Is this another person who was also a victim of this batch no. 3004734?

Jessica, 316 is "marine grade" stainless steel. 316L is a variety of 316. 316 would be perfect for those little tiny screws that hold surf board fins to the board.

Steve

Thanks Steve!

This person died the day after the shot so whatever it was, it did him in quickly. This is a report made for a 49-year male but I am pretty sure that this is not the same male referred to in the previous report. The SPLTTYE references are JP-MODERNATX, INC.-MOD-2022-636030 and JP-MODERNATX, INC.-MOD-2022-636122 but weirdly enough, at the bottom again, it is written that these two SPLTTYEs are associated with Male 30s. So which is it? 49 or 30? Are they confused about the 2 men who died in their 30s from contamination?

2324970	Death , Product contamination physical	38	FR	M
---------	--	----	----	---

Three lots of the product were found to be contaminated with 316L stainless steel particles. Died the day after receiving the Moderna's Spleen shot. This spontaneous case was reported by a consumer and describes the occurrence of SEPTIC SHOCK 19 year old man died after receiving moderna in a 38-year-old male patient who received mRNA-1273 (COVID-19 Vaccine Moderna Intramuscular Injection) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below. No Medical History information was reported. On an unknown date, the patient received second dose of mRNA-1273 (COVID-19 Vaccine Moderna Intramuscular Injection) (unknown route) 1 dosage form. On an unknown date, the patient experienced SEPTIC SHOCK 19 year old man died after receiving moderna, foreign material in vials. This spontaneous case was reported by a consumer and describes the occurrence of SEPTIC SHOCK 19 year old man died after receiving moderna, foreign material in vials. The cause of death was not reported. It is unknown if an autopsy was performed. At the time of death, PRODUCT CONTAMINATION PHYSICAL (foreign material) was also reported. The event death occurred after the second dose of mRNA-1273 vaccine administration. Allegedly, the event was described as it was determined that 3 batches of mRNA-1273 vaccine contained foreign materials. Hence, the administration of 3 full batches of mRNA-1273 vaccine was previously suspended. On unknown date, the patient received second dose of mRNA-1273 from one of these three batches. On unknown date, patient died after receiving second dose of mRNA-1273 vaccine. The reported cause of death was Sudden cardiac death. It is unknown if an autopsy was performed. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report. Reported Cause(s) of Death: Unknown cause of death

So it's possible that these 3 reports are for only these 2 men. I am not sure. But take a look at this weird one.

There also seems to be a report (VAERS_ID = 2326342) for one of those 2 men in their 30s, however, with a separate reference to them in this free text, I have to wonder if this isn't an additional report.

2326342	Death , Product contamination physical	36	FR	M
---------	--	----	----	---

This spontaneous case was reported by a consumer and describes the occurrence of SEPTIC SHOCK 19 year old man died after receiving moderna in a 38-year-old male patient who received mRNA-1273 (COVID-19 Vaccine Moderna Intramuscular Injection) for COVID-19 prophylaxis. The occurrence of additional non-serious events is detailed below. No Medical History information was reported. On an unknown date, the patient received second dose of mRNA-1273 (COVID-19 Vaccine Moderna Intramuscular Injection) (unknown route) 1 dosage form. On an unknown date, the patient experienced SEPTIC SHOCK 19 year old man died after receiving moderna, foreign material in vials. The benefit-risk relationship of mRNA-1273 vaccine is not affected by this report. Reported Cause(s) of Death: Unknown cause of death

One more thing about the confusing free text is that it was likely translated from Japanese, so this might explain some of the strange phrasing.

I didn't expect this so I thought to write it down.

A lot of deaths in the context of contamination and inconsistencies in the reports of death for Japanese people in the context of the Moderna products. Did more than 11 people die in association with the Moderna shot? Did they get reported to the adverse event data collection system in Japan?

Many unanswered questions. I think this the tip of yet another iceberg.

Cheers

Contaminated batches should not defect from the fact the FOIA requests point to an alarming number of adverse events that parallel what society is experiencing. We must be careful this doesn't send the message that mRNA vaccines are OK, it was just those darn batches that were the problem. Wrong. mRNA is flawed and must be pulled at once. It's fine if batch contamination adds to the danger. Just don't let it excuse the danger.

Because they're not following cGMP. Sasha Latypova will be in Oslo with you so talk to her about this specifically.

This is one of the emails I received the other day. I get hundreds daily, and I am hearing you all.

This particular note spoke loudly to me and this lovely person gave me permission to share her words.
